

Shuaib B

Alapuuzha, Kerala | 8138831211 | s4shuaib02@gmail.com | GitHub

Professional Summary

.NET Developer with **1.5+ years** of experience developing backend applications using **ASP.NET Core** and hands-on experience building full-stack web applications with **Angular**. Skilled in **REST API development**, **Clean Architecture**, **JWT authentication**, **OAuth 2.0**, **Dapper**, **Docker**, and relational databases. Currently contributing to enterprise clinic management systems while continuously expanding full-stack expertise through production-style personal projects.

Education

Mahaguru Institute of Technology – Kayamkulam, Alappuzha, Kerala 2020 – 2024
Bachelor of Technology (B.Tech) in Computer Science and Engineering

Experience

.NET Developer, Kaizenstar Technologies – Ernakulam, Kerala Dec 2024 – Present

- Developed and maintained **ASP.NET Core REST APIs** for clinic management applications, integrating with **MySQL stored procedures**, internal services, and external systems to deliver secure RESTful endpoints.
- Built a production-ready automated database migration framework using **ASP.NET Core Hosted Services**, embedding SQL scripts with version tracking and **MySQL-level locking** for reliable deployments across multiple environments.
- Designed and implemented a reusable **Hangfire-based background job service** for notification and email scheduling, supporting **fire-and-forget**, **scheduled**, **recurring**, and **concurrent jobs**, with a modular design that can be integrated across multiple applications.
- Worked within a modular architecture consisting of Models, Data Access, Controllers, and shared library projects, contributing to feature development while following established architectural practices.
- Developed reporting and document generation solutions using **RDLC**, **QuestPDF**, and **FastReport**, and implemented PDF template-based document generation by mapping application data to fillable PDF form fields.
- Maintained and enhanced enterprise-grade Windows-based clinic management systems built on the **.NET Framework**, delivering feature enhancements, production support, and client deployments.
- Solely responsible for managing Windows application clients, including software updates, issue resolution, and production support across multiple customer environments.
- Contributed to the development and maintenance of **Clinic Management** and **Inventory Management** modules within an ERP application.

Project Experience

FormatX - File Conversion SaaS Platform Live Demo

- Developed and deployed a production-ready full-stack file conversion platform with 5+ conversion tools (HL7 Parser, JSON Formatter, PDF-to-Image, Image-to-PDF, Text-to-PDF), processing files server-side with real-time feedback and download capabilities.
- **Backend Architecture:** Built REST API using **ASP.NET Core Web API** following **Clean Architecture** (API → Application → Infrastructure layers), implemented factory pattern for extensible tool processing, integrated **Dapper** for high-performance data access with **PostgreSQL** (Supabase), and used **FluentValidation** with global exception middleware for centralized error handling.
- **Authentication System:** Implemented dual authentication supporting email/password and **Google OAuth 2.0**, featuring **JWT-based access tokens** (15-min expiry) with **refresh token** mechanism (7-day expiry), server-side Google ID token verification using Google APIs, and HTTP interceptor for automatic token refresh on 401 errors.

- **Frontend Development:** Built responsive SPA using **Angular 16** with reusable component architecture (tool layouts, modals, toast notifications), implemented **RxJS Observables** for async operations and state management using BehaviorSubject, created authentication modal with tab-based UI, and integrated Google Sign-In SDK with secure token handling.
- **DevOps & Deployment:** Containerized backend using **Docker**, deployed Angular frontend to **Vercel** and Dockerized backend to **Render** with automatic deployment on GitHub push, and configured CORS policies for cross-origin requests between frontend and backend.
- **File Processing:** Used **iText7** for PDF generation and manipulation, **ImageSharp** for PDF-to-image conversion, and implemented memory-efficient stream-based file handling with base64 encoding for frontend rendering.
- **Architecture Highlights:** Dependency injection throughout all layers, standardized API response wrapper with metadata (processing time, input/output size), repository pattern for data access abstraction, and async operations across the entire codebase for improved scalability.
- **Tech Stack:** Angular 16, ASP.NET Core Web API, PostgreSQL (Supabase), Dapper, JWT, Docker, Vercel, Render, GitHub

Skills

- **Programming Languages:** C#, TypeScript, JavaScript, SQL
- **Backend:** .NET Framework, .NET Core, ASP.NET Core Web API, Dapper
- **Frontend:** Angular, TypeScript, HTML, CSS, RxJS
- **Database:** MySQL, SQL Server, PostgreSQL
- **Authentication & Security:** JWT, OAuth 2.0 (Google), Refresh Token Mechanism, HTTP Interceptors
- **Cloud & Deployment:** Docker, Vercel, Render, Supabase, GitHub
- **Reporting Tools:** FastReport, RDLC, QuestPDF
- **Tools & IDEs:** Visual Studio, VS Code, Postman, Git, Jira, Bitbucket
- **Architecture & Patterns:** Clean Architecture, Layered Architecture, Dependency Injection, Factory Pattern, Repository Pattern, RESTful API Design, CORS

Certifications & Training

ASP.NET Full Stack Development Course – Luminar Technolab, Ernakulam

Oct 2024 – Apr 2025

- Completed a 6-month intensive ASP.NET Full Stack Developer training program.
- Gained hands-on experience in .NET, Web API, SQL, Git, and real-time full stack development workflows.
- Received strong industry-level project exposure and mentoring from experienced trainers.
- Secured a job offer and joined Kaizenstar Technologies after the first month of training.
